

BEMORE ADVISORY TEAM

Dr. Bobbi Kline, MD

CHIEF SCIENTIFIC & CLINICAL ADVISOR FOR HEALTH INNOVATION

Physician • Integrative Health Strategist • Clinical Innovation Advisor • Scientific Communications Authority • Whole-Person Health Visionary

Among the greatest challenges facing today's healthcare innovators is not creating breakthrough technologies—it is helping the public, healthcare professionals, investors, and policymakers understand why those innovations matter. Scientific discovery alone rarely changes healthcare. Translation does.

Throughout her distinguished career as a physician, educator, genomics expert, and nationally recognized advocate for whole-person health, **Dr. Bobbi Kline** has built a reputation for translating complex clinical science into meaningful human understanding. Drawing upon decades of experience in medicine, women's health, integrative care, prevention, genomics, and healthcare education, she serves as a trusted advisor to organizations introducing transformative technologies, diagnostic platforms, therapeutic solutions, and innovative models of care. Her work reflects a philosophy that modern health innovation succeeds only when scientific credibility is paired with clear clinical communication, educational leadership, and public trust.

Today, Dr. Kline's role extends far beyond that of physician or keynote speaker. She functions as a strategic scientific advisor—helping emerging companies, healthcare organizations, research institutions, and medical innovators define, communicate, and validate the science behind their work. Rather than serving as a spokesperson, she becomes an interpreter of innovation, ensuring that new technologies are presented with clinical accuracy, scientific integrity, and practical relevance to physicians, patients, healthcare systems, and the marketplace.

Healthcare technologies often fail to reach their potential because they communicate features instead of outcomes, engineering instead of patient benefit, or data instead of meaning. Dr. Kline bridges that gap. She helps organizations transform technical innovations into compelling scientific narratives that physicians understand, patients trust, and healthcare leaders embrace.

Whether evaluating an emerging diagnostic platform, reviewing the science behind a therapeutic intervention, refining educational materials for a digital health application, or strengthening the credibility of a medical communications campaign, Dr. Kline brings a uniquely interdisciplinary perspective. Her experience spans traditional clinical medicine, genomics, functional and integrative health, preventive medicine, lifestyle medicine, leadership development, and professional education—allowing her to evaluate innovations not only for scientific validity but also for real-world application and patient impact.

Translating Science into Confidence

One of Dr. Kline's greatest strengths is helping organizations explain **why** an innovation works—not simply **what** it does.

Her advisory work frequently includes:

- Clinical review of emerging healthcare technologies
- Scientific validation and interpretation of research
- Development of physician-facing educational materials
- Consumer health education
- White papers and scientific position statements
- Marketing and communications strategy grounded in evidence
- Medical conference presentations
- Advisory Board participation
- Clinical messaging for websites, publications, and investor presentations
- Strategic positioning of healthcare innovations within competitive markets

Clients frequently seek Dr. Kline's guidance because she brings the perspective of someone who has spent decades caring for patients while simultaneously understanding the educational challenges facing innovators introducing disruptive technologies. She recognizes that successful adoption depends not only upon evidence, but upon trust, clarity, credibility, and thoughtful communication.

Her contributions often become the scientific foundation upon which companies build stronger public positioning, professional credibility, and market confidence.

A Trusted Scientific Voice

Healthcare innovators increasingly recognize that today's marketplace requires more than technical excellence. Physicians demand evidence. Patients demand education. Investors seek credibility. Regulatory agencies expect responsible communication. The public wants understandable science. **Dr. Kline helps organizations satisfy all four.**

Rather than functioning solely as a medical reviewer, she helps leadership teams think strategically about how scientific innovation should be introduced into the marketplace. Her ability to integrate medicine, systems thinking, human behavior, education, and communication has positioned her as an advisor capable of helping organizations move beyond product promotion toward genuine healthcare leadership.

Her philosophy aligns closely with the future of healthcare itself—one that emphasizes prevention, personalization, education, patient engagement, and interdisciplinary collaboration. This evolution from clinician to strategic advisor reflects a broader vision of influencing healthcare systems rather than individual patient encounters.

Scientific Advisory Services

Dr. Kline provides strategic consultation for:

- Medical technology companies
- Digital health platforms
- Artificial intelligence applications in healthcare
- Diagnostic and imaging technologies
- Women's health innovations
- Longevity and preventive medicine programs
- Functional and integrative medicine organizations
- Genomics and personalized medicine companies
- Nutritional science enterprises
- Medical device manufacturers
- Healthcare startups
- Research collaborations
- Medical advisory boards
- Educational institutions
- Professional medical societies

Her work may include scientific review, educational strategy, medical communications, advisory board participation, keynote presentations, thought leadership, publication development, clinical validation support, and executive guidance throughout the commercialization process. These activities align with the strategic advisory identity envisioned in her professional blueprint, emphasizing evaluation of emerging technologies, educational program development, and interdisciplinary collaboration.

Recommended Professional Titles

For health technology and innovation organizations, the strongest positioning would be:

Primary Title

- **Chief Scientific & Clinical Advisor**

Additional Professional Titles

- Clinical Innovation Advisor
- Scientific Communications Advisor
- Medical Science & Innovation Advisor
- Integrative Health Strategist
- Healthcare Innovation Advisor
- Scientific Education Advisor
- Clinical Strategy Advisor
- Senior Medical Communications Advisor
- Translational Science Advisor
- Clinical Validation & Education Consultant
- Executive Advisor for Health Technologies
- Strategic Advisor in Personalized & Integrative Medicine
- Advisor in Clinical Innovation & Healthcare Education
- Scientific Advisor for Emerging Health Technologies

Professional Positioning Statement

Dr. Bobbi Kline represents a new generation of physician-advisors who bridge clinical medicine, scientific innovation, and strategic communications. By combining decades of medical experience with expertise in education, integrative health, genomics, and whole-person care, she helps organizations translate scientific discovery into credible, understandable, and clinically meaningful solutions. Her guidance strengthens the public positioning of innovative technologies while ensuring that the science supporting those innovations is communicated with clarity, integrity, and lasting impact.
